

1. **What type of sheathing is on the building?** (Plywood, OSB, gypsum, fiberboard or 1x material.)

2. What type of water resistive barrier is being installed over the sheathing? (Paper type or product brand name.)

3. Will you be installing a three-coat system? ☐ Yes ☐ No

If no, describe system to be used. Supply materials list and the manufacturer's application specifications.

4. Will you be using any admixtures? ☐ Yes ☐ No

If yes, what is the desired end result in using them?

Acknowledgements

Sign and date.

I have been given a packet of stucco installation information from the City.

Title

Date _____

I clearly understand that a water resistive barrier/lath inspection is required **prior** to installing the first coat.

Signature

I understand that should the required inspections not be called for, an eight by eight foot area of the City Inspector's choosing will be removed for the Code-required inspection. Furthermore, if the City Inspector finds code failures within the eight-foot area, all the stucco must be removed and corrected to meet the *Minnesota State Building Code and ASTM Standards C926-98a and C1063-03*.
